### Investment in McIntosh and Monthey

Huntsman Advanced Materials, the global market leader in multifunctional epoxy resins, announced in September an expected \$50 million investment to expand capacity and capability for multi-functional epoxy resin production in the US and Europe.

A major step towards expanding one of our key product lines will be the start of in-depth engineering study at McIntosh, Alabama facility.

Once completed, the new line will boost global production of all types of multifunctional epoxy resins, serving current and future needs of customers in the aerospace and composite industries.
